

ABSTRACT

This project is about website for car rental system. Hence this website will ask user to fill the required details. And then user can check the availability of the services. This service is available all over INDIA.

To use these services user need to first register in the website through log in option.

The proposed system is completely integrated online systems. It automates manual procedure in an effective and efficient way.

If user found any issue then he/she can contact to the customer support which is available any time.

INTRODUCTION

The main objective of the application car rental system is to fulfil the requirement of temporary vehicle, for example those who do not own their own car, or owner damaged or destroyed vehicles who are awaiting repair or insurance or travellers who are out of town. So they can enjoy their ride using this website at rental price. They need not to worry a lot.

LITERATURE REVIEW

This car rental system is available for six cities that is Amritsar, Chandigarh, Delhi, Mumbai, Patna and lucknow. This website mainly consist of four pages. First is home page that ask to choose the city the customer want to avail car. He could sign in before that.

PROPOSED METHODOLOGY

Customer will be asked to select city.

Then customer needs to enter destination.

Customer can also choose destination from map provided in the website.

Two links will appear for book now and for book later as per requirement.

Different car section will be displayed according to price where customer can visit and check car details and book their car for particular time limit.

RESULT AND DISCUSSION

This website provide smoothness and efficiency.

Any one can book car when they need.

It can be done by sitting at home.

It will give permanent job for drivers.

It assures safety of the customer as the driver is known by company.

The customer is directly asking to the company. So customer can not be cheated.

Billing can also be done online so no cash issue.

CONCLUSION

According to me the future generation wants to be more and more automated. And for this everyone is experimenting new things. Online availability is highly responsible to make things automated. Other than this it found no disadvantages. It will also reduce the cost because no third man involvement is present
